

Gormel Creme 20% Urea

- Gormel Cream is used for moisturizing and softening dry, cracked, calloused, rough and hardened skin of feet, hands or elbows.
- The Urea is delivered through a white odorless cream base which helps penetrate the thick skin that can form on feet.
- Gormel Creme helps prevent the painful splitting skin that can form on heels, and offers a prompt and effective way to get relief.
- It also softens and moisturizes hardened skin of the elbows, hands, as well as other parts of the body, thus restoring a smoother youthful look to the skin.
