

NeuRemedy

NeuRemedy is a dietary supplement that helps support healthy function of the nerves in the feet and legs. The dietary ingredient in NeuRemedy is used worldwide to promote healthier nerve function. The specialized proprietary formulation in NeuRemedy contains benfotiamine. Benfotiamine has been used since the early 1960's to successfully help tens of thousands of people support the healthy functioning of their nervous system. It has been extensively studied in the scientific literature and has been shown to be safe and effective. Realm Laboratories has recently made NeuRemedy available in the U.S.A.

Adequate blood levels of the micro-nutrient thiamine (Vitamin B1) are essential for the proper functioning in the feet and legs. People with low levels of vitamin B1 benefit from a more bioactive form of thiamine to help their nerves to function properly. This population includes, but is not limited to, the elderly, people with diabetes, and patients on certain medications. For these people, NeuRemedy delivers a highly bioactive form of the micro-nutrient thiamine to where it is needed, the nerve cells.
