

SteriShoe Anti-fungal Systems

The SteriShoe+ takes what we learned over five years and incorporates every feature we could think of to make a better product. Improvements from our original SteriShoe sanitizer are: 1) it's a one sized product, 2) it has a more powerful lamp for a 15 minute treatment time (instead of 45 min.), 3) we added a fan to help dry shoes, 4) there is an active deodorization system (when using the scent pouches), 5) it's designed to have the UV light go forward and back into the shoe, 6) the stainless steel frame is robust and solid.

The SteriShoe® Essential is our basic UV shoe sanitizer. Modeled on our original SteriShoe sanitizer it uses the same UVC lamp as the original SteriShoe shoe sanitizer, but has been designed as a one size product to fit all shoesizes.
